

ABSTRACT OF THE DISCLOSURE

The present invention relates to an image processing method, an image processing apparatus and an image processing program for dealing with inverted
5 characters (outlined characters) constituted by white pixels on a black ground in a tree structure same as that of normal characters constituted by black pixels on a white ground.

In the present invention, black pixel blocks
10 and white pixel blocks are sampled recursively from a binary image, tree structure data indicating a positional relation between the sampled black pixel blocks and white pixel blocks is created, an inverted image is created by white-black-inverting the insides
15 of black pixel blocks that can include inverted characters, of black pixel blocks included in the tree structure data, white pixel blocks and black pixel blocks are sampled from the created inverted image, and data regarding the sampled white pixel
20 blocks and black pixel blocs is added to corresponding nodes of the tree structure data.
